Art Unit: 1725

1. Applicant is advised that the article "Amorphous Zr-Al-TM(TM=Co, Ni, Cu) Alloys with Significant Supercooled Liquid Region of Over 100K" by Zhang et al. cited in the IDS, dated September, 2006 had not been considered by the Examiner since no copy of the reference was provided by applicant.

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over either US 5,647,921 to Odagawa et al. or US 4,768,458 to Arakawa et al.

Each of the prior art references substantially shows the invention as claimed except that they do not shows the stabilizing step for obtaining the viscosity of the bulk solidifying amorphous in the regime of about 0.1 to 10,000 poise. However, since the puddle of the bulk solidifying amorphous alloy on the chill surface must be in a stable condition, it would have been obvious to obtain an appropriate viscosity of the casting alloy through a routine experimentation such that the injected melt will form a stable puddle. With respect to claims 4, 5, 11-15 and 20, it would have been obvious to obtain these process parameters through a routine experimentation for a specific alloy product to be cast. With respect to claims 17 and 18, those alloy compositions are deemed to be conventional (see, for example, US 4,148,669 to Tanner et al. and JP 2001-303,218).

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kuang Y. Lin whose telephone number is 571-272-1179. The examiner can normally be reached on Monday-Friday, 10:00-6:30,.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jonathan J. Johnson can be reached on 571-272-1177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
